1. Welding studs for drawn arc stud welding

1.1 Technical information

Materials

Non-alloyed steels

Our threaded studs, internally threaded studs, non-threaded studs and similar welding elements are made from steel, strength class 4.8 (suitable for welding) (according to DIN EN ISO 898-1) with excellent weldability. Mechanical properties: yield strength (R_{el}) $\geq 340 \text{ N/mm}^2$, tensile strength (R_m) $\geq 420 \text{ N/mm}^2$, elongation (A_5) $\geq 14\%$.

Shear connectors are made from S235J2+C450. Mechanical properties: yield strength (R_{el}) $\geq 350 \text{ N/mm}^2$, tensile strength (R_m) $\geq 450 \text{ N/mm}^2$, elongation (A_5) $\geq 15\%$.

Stainless steels

Our threaded studs, internally threaded studs, non-threaded studs and similar welding elements are made from A2-50 (suitable for welding) according to DIN EN ISO 3506-1 (mechanical properties: yield point ($R_{p0,2}$) $\geq 210 \text{ N/mm}^2$, tensile strength (R_m) $\geq 500 \text{ N/mm}^2$, elongation (A_L) $\geq 0,6d$) and 1.4571 (suitable for welding) according to DIN EN ISO 3506-1 (mechanical properties: yield point ($R_{p0,2}$) $\geq 210 \text{ N/mm}^2$, tensile strength (R_m) $\geq 500 \text{ N/mm}^2$, elongation (A_L) $\geq 0,6d$) as well as from 1.4541 and 1.5415 (16Mo3).

The material specifications conform with DIN EN ISO 13918 and DIN EN ISO 14555. For welding studs from other materials please send us your inquiry or contact us.

On demand, the material properties can be verified by an inspection document (test report, inspection certificate) according to DIN EN 10204.

We are pleased to inform you about weldability to different base materials and welding parameters.

Dimensions

Welding studs dimensions are given in the measurement tables (all dimensions in mm). All standardised welding studs conform to DIN EN ISO 13918. Not standardised welding studs are supplied according to DIN EN ISO 13918. Special welding elements, which are not described, are delivered upon request.

Dimensions that are not listed in the measurement tables are delivered upon request.

The nominal length (l_2) always corresponds to the length after welding. Depending on the diameter the length before welding (l_1) is larger by a weld allowance of 1 to 5 mm.

Flux (aluminium ball) and weld pool backing

According to DIN EN ISO 13918 welding studs for drawn arc stud welding standardly have an aluminium ball at the welding tip. This serves as flux for improved ignition and stabilization of the electric arc as well as for deoxidising the weld pool.

For weld pool backing standardly ceramic ferrules are used. Accordingly, suitable ceramic ferrules are included in every stud shipment. A ceramic ferrule can only be used once; it is removed from the stud after welding by striking at it.

Up to a diameter of 10 mm shielding gas can be used as an alternative for weld pool backing. Upon request, we therefore deliver studs without aluminium ball at the welding tip and without ceramic ferrules.

Surface protection

Usually our welding studs are supplied in bright condition. On demand, the following surface treatments are possible (coating thicknesses according to DIN EN ISO 4042):

1. galvanically zinc-plated
2. hot zinc dipped
3. zinc flake coated fZnnC-600h
4. galvanically copper-base-coated and nickel-plated
5. galvanically copper-plated

The surface treatments 1, 2 and 3 have a negative impact on the welding quality and are therefore removed from the welding tip.

Threads

The threads of the studs are cold rolled (tolerance limit 6g). For surface-treated studs the tolerance limit 6h can be reached.

The thread of hot zinc dipped studs is not true to gauge. For hot zinc dipped studs nuts with allowance for interference have to be used.

We deliver studs with special threads upon request.

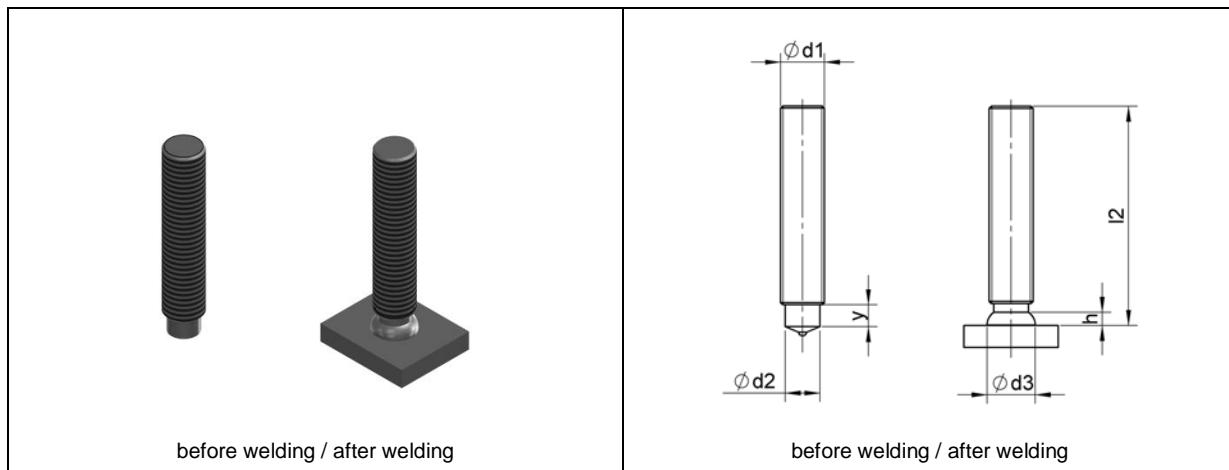

Weld fillet

During drawn arc stud welding a fillet forms between welding element and base material. The dimensions of the weld fillet are defined by the used ceramic ferrule and the welding parameters. The dimensions that are given in the measurement tables are approximate values. The diameter of the weld fillet is always bigger than the nominal diameter of the welding element.

Accessories for stud welding guns

Accessories for stud welding guns (chuck, ferrule grip, foot piece etc.) have to be adjusted to the welding element. The accessories which are to be used for the individual welding studs can be found in chapter 3.

1.2 Threaded stud with reduced shaft (type RD acc. to DIN EN ISO 13918)

The threaded stud type RD is threaded almost to the top of the welding tip which is reduced to about the core diameter of the thread. Thus the fillet diameter will only be slightly (0,5-1 mm) bigger than the external diameter of the thread. It is worthy of note that the reduction of the welding tip diminishes the bearing force of the stud by approximately 15% in comparison to the type MPF/PD/MD. Thus - if necessary - the next bigger diameter should be chosen.

¹Other y-dimensions available upon request.

²for l₂ < 20 mm

*d₃ and h are approximate values.

Upon request: without aluminium ball at the welding tip (as standard according to DIN EN ISO 13918 with aluminium ball (see explanation in chapter 1.1)).

In the item number XXX has to be replaced by the respective welding element length l₂ (e.g. 030 for 30 mm).

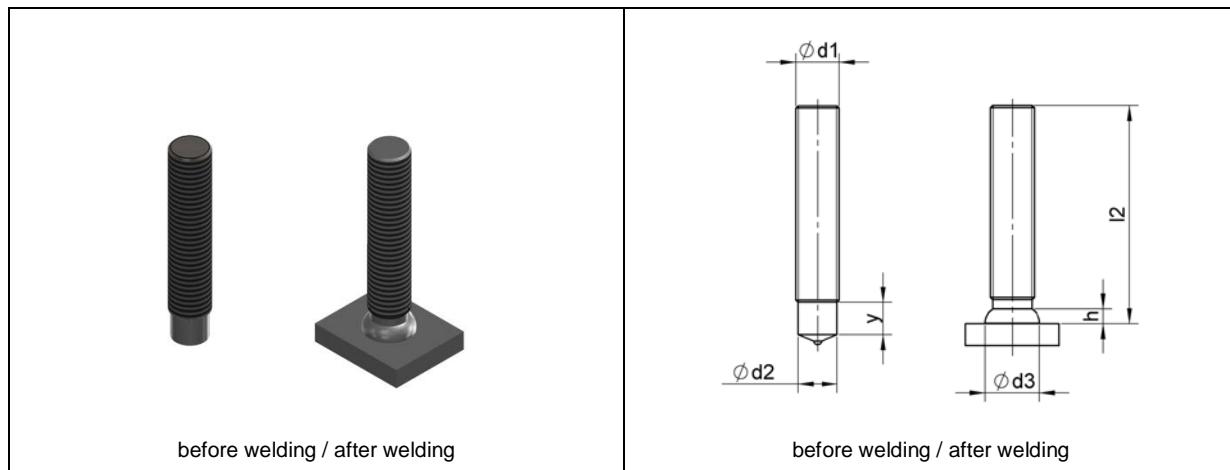

Explanations to the used materials can be found in chapter 1.1.

Available surface treatments can be found in chapter 1.1.

Not listed dimensions and materials available upon request.

1.3 Threaded stud (type MPF)

The threaded stud type MPF is threaded to approximately the top of the welding tip. The diameter of the unthreaded stud section on the welding tip corresponds to the pitch diameter of the thread. Thus the diameter of the weld-fillet is approximately 3-4 mm larger than the external diameter of the thread.

*d₃ and h are approximate values.

Upon request: without aluminium ball at the welding tip (as standard according to DIN EN ISO 13918 with aluminium ball (see explanation in chapter 1.1)).

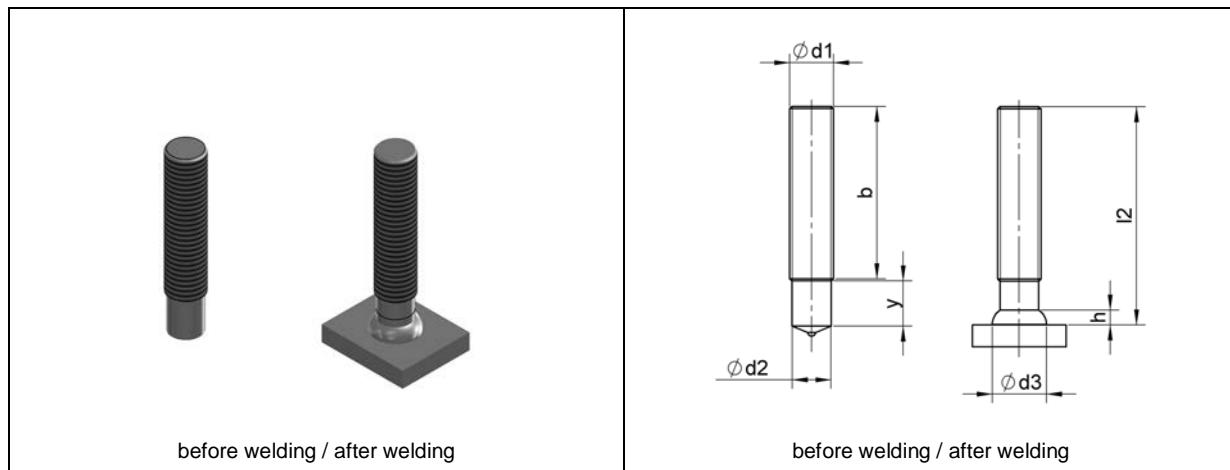

In the item number XXX has to be replaced by the respective welding element length l₂ (e.g. 030 for 30 mm).

Explanations to the used materials can be found in chapter 1.1.

Available surface treatments can be found in chapter 1.1.

Not listed dimensions and materials available upon request.

1.4 Threaded stud with partial thread (type PD acc. to DIN EN ISO 13918)

The threaded stud type PD has a partial thread. The diameter of the unthreaded stud section on the welding tip corresponds to the pitch diameter of the thread. Thus the diameter of the weld-fillet is approximately 3-4 mm larger than the external diameter of the thread.

*d₃ and h are approximate values.

Upon request: without aluminium ball at the welding tip (as standard according to DIN EN ISO 13918 with aluminium ball (see explanation in chapter 1.1)).

In the item number **XXX** has to be replaced by the respective welding element length l₂ (e.g. 030 for 30 mm).

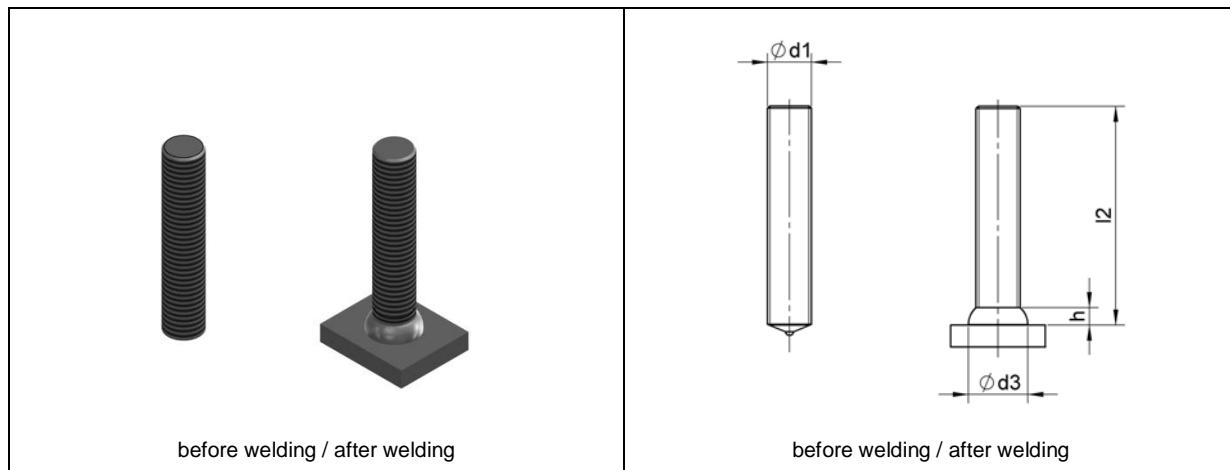

Explanations to the used materials can be found in chapter 1.1.

Available surface treatments can be found in chapter 1.1.

Not listed dimensions and materials available upon request.

1.5 Threaded stud with full thread (type MD)

The threaded stud type MD corresponds to the threaded studs MPF and PD, but is threaded almost to the top of the welding tip. Thus after welding the stud is threaded up to the weld-fillet. The diameter of the weld-fillet is approximately 3-4 mm larger than the external diameter of the thread.

Explanations to the used materials can be found in chapter 1.1.

Available surface treatments can be found in chapter 1.1.

Not listed dimensions and materials available upon request.

1.8 Bimetallic threaded stud (type MPF-DUO)

The threaded stud type MPF-DUO consists of two different materials. It is threaded to approximately the top of the welding tip. The diameter of the unthreaded stud section on the welding tip corresponds to the pitch diameter of the thread. Thus the diameter of the weld-fillet is approximately 3-4 mm larger than the external diameter of the thread.

Explanations to the used materials can be found in chapter 1.1.

Not listed dimensions and materials available upon request.

1.9 Bimetallic threaded stud with partial thread (type PD-DUO)

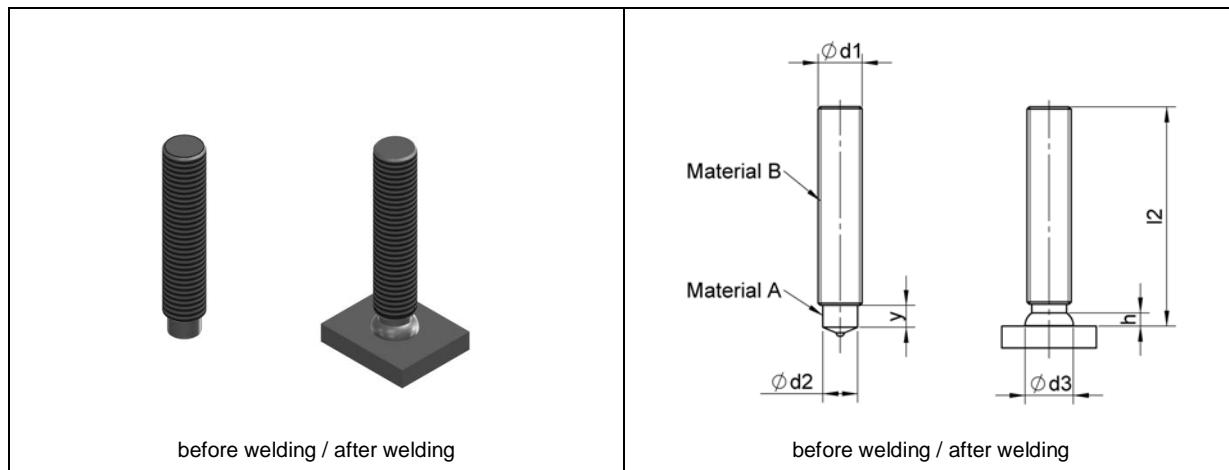

The threaded stud type PD-DUO consists of two different materials. It has a partial thread. The diameter of the unthreaded stud section on the welding tip corresponds to the pitch diameter of the thread. Thus the diameter of the weld-fillet is approximately 3-4 mm larger than the external diameter of the thread.

Available dimensions and materials available upon request.

1.10 Bimetallic threaded stud with reduced shaft (type RD-DUO)

The threaded stud type RD-DUO consists of two different materials. It is threaded almost to the top of the welding tip which is reduced to about the core diameter of the thread. Thus the fillet diameter will only be slightly (0,5-1 mm) bigger than the external diameter of the thread. It is worthy of note that the reduction of the welding tip diminishes the bearing force of the stud by approximately 15% in comparison to the type MPF/PD/MD. Thus - if necessary - the next bigger diameter should be chosen.

Dimensions						Material (item number)		Ceramic ferrule
d ₁	l ₂	y _{min} ¹	d ₂	d ₃ [*]	h [*]	A: steel 4.8, B: 1.4571	A: steel 4.8, B: A2-50

1.30.8 Permanent ceramic ferrule for insulation pins (type K)

	
---	--

A permanent ceramic ferrule can be used for approx. 100 weldings of insulation pins.

Description	Dimensions				Item number
	D ₇ -0/+0,5	d ₈ -1/+1	d ₉ -1/+1	h ₂	
K 5	5,3	16,2	18	≈ 9	75-00-005-K5
K 6	6,3	16,2	18	≈ 9	75-00-006-K6

1.30.9 Ceramic ferrule for rectangular studs (type KF)

	
---	---

Description	Dimensions				Item number
	D ₇ -0,7/+0,7	d ₈ -1/+1	d ₉ -1/+1	h ₂	
KF 15x3	16	20,5	26,5	≈ 11	71-00-153
KF 15x5	16	20,5	26,5	≈ 11	71-00-155
KF 25x3	25,5	30,5	35,5	≈ 13	71-00-253
KF 25x5	25,5	30,5	35,5	≈ 13	71-00-255

1.30.10 Special ceramic ferrule (welding through metal deck) for shear connectors (type UFD)

Special ceramic ferrule for welding through metal deck (welding of shear connectors through thin, mostly zinc-plated deck sheets onto the top belt of a steel beam).

When welding through zinc-plated deck sheets there are high amounts of degasification through zinc evaporation. The special ceramic ferrule type UFD with larger combustion chamber and larger degasification slots considerably improves the welding result.

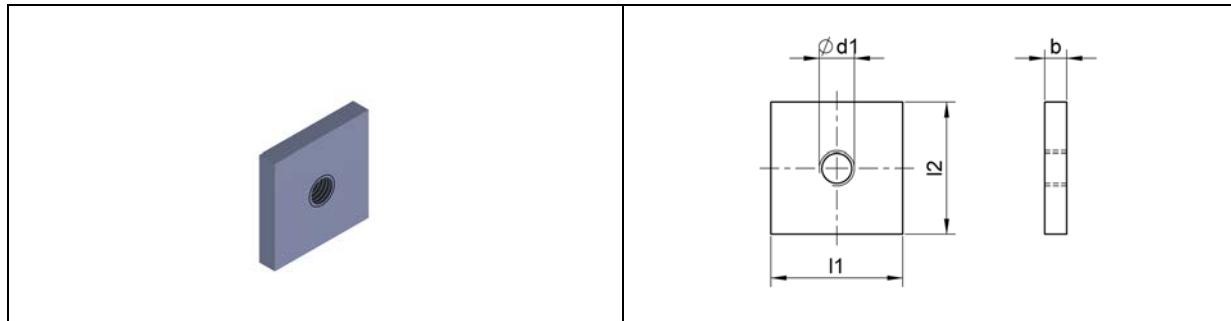

Description	Dimensions				Item number
	D ₇ -0/+0,5	d ₈ -1/+1	d ₉ -1/+1	h ₂	
UFD 16	16,5	25,5	30,2	≈ 17,7	75-00-016-D
UFD 19	20,5	30,8	33,8	≈ 15,2	75-00-019-D

Not listed dimensions available upon request.

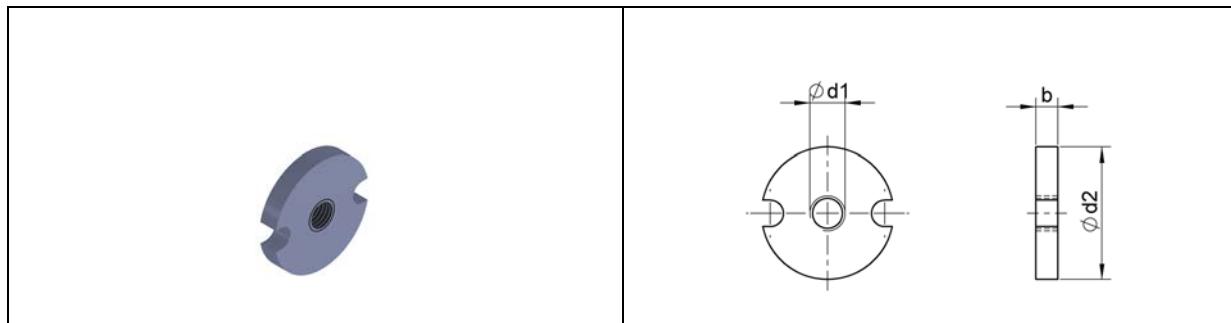

1.31 Fixing accessories

1.31.1 Threaded plate

Available dimensions and materials available upon request.

1.31.2 Disk nut

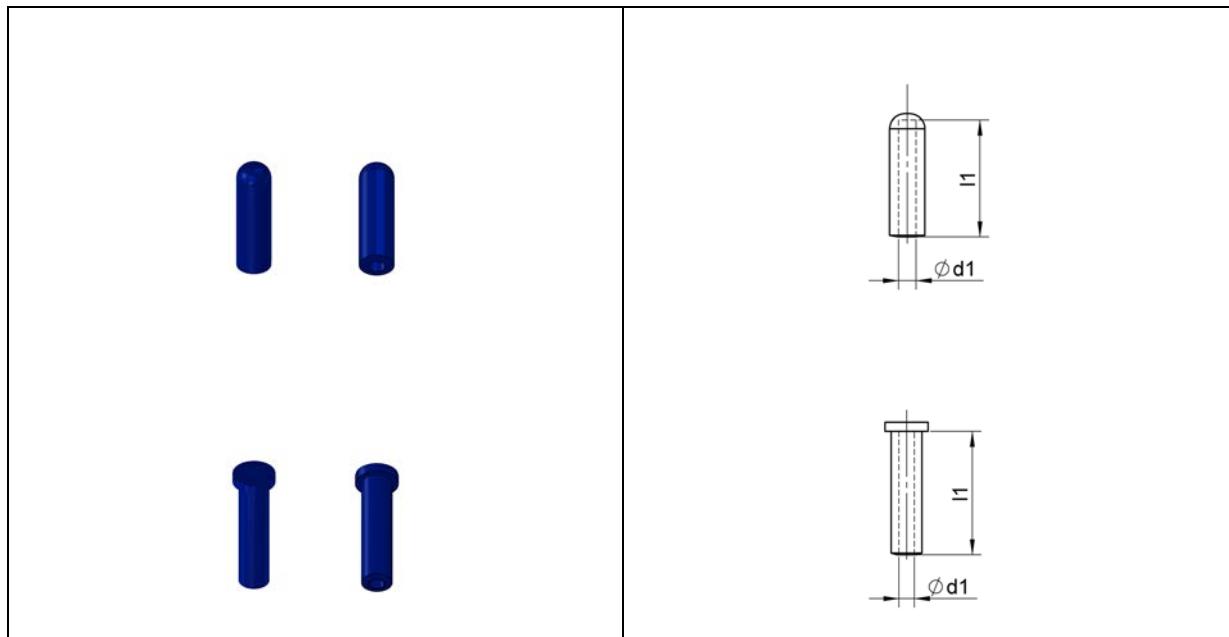

Available dimensions and materials available upon request.

1.32 Silicone cover caps

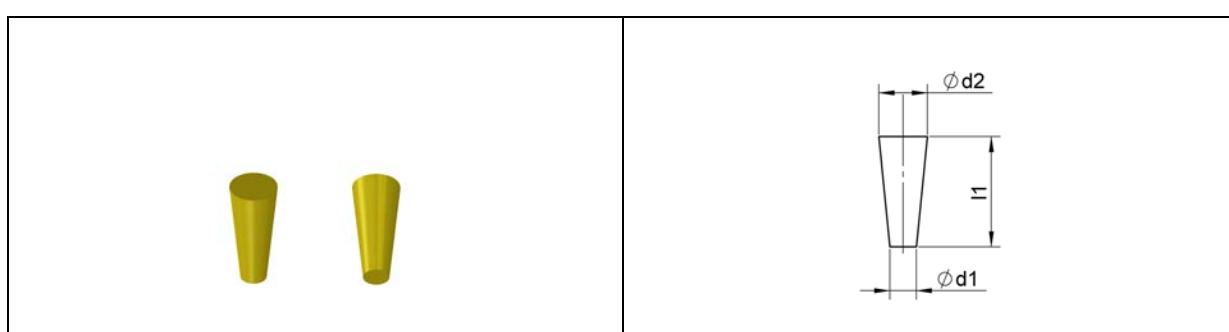

Silicone cover caps protect the mechanical important areas of the welding elements during painting and powder coating as well as during the burning-in process (permanent temperature $\leq 210^\circ \text{C}$, short temperature $\leq 300^\circ \text{C}$).

1.32.1 Silicone cover caps for threaded studs and non-threaded studs

Available dimensions available upon request.

1.32.2 Silicone cover caps for internally threaded studs

Available dimensions available upon request.

2. Welding studs for short cycle stud welding

2.1 Technical information

Materials

Our welding studs are standardly made from the following materials:

- steel, strength class 4.8 (suitable for welding) (according to DIN EN ISO 898-1) with excellent weldability
Mechanical properties: yield strength (R_e) $\geq 340 \text{ N/mm}^2$, tensile strength (R_m) $\geq 420 \text{ N/mm}^2$, elongation (A_5) $\geq 14\%$
- stainless steel A2-50 (suitable for welding) according to DIN EN ISO 3506-1
Mechanical properties: yield point ($R_{p0,2}$) $\geq 210 \text{ N/mm}^2$, tensile strength (R_m) $\geq 500 \text{ N/mm}^2$, elongation (A_L) $\geq 0,6d$
- stainless steel 1.4571 (suitable for welding) according to DIN EN ISO 3506-1
Mechanical properties: yield point ($R_{p0,2}$) $\geq 210 \text{ N/mm}^2$, tensile strength (R_m) $\geq 500 \text{ N/mm}^2$, elongation (A_L) $\geq 0,6d$

The material specifications conform with DIN EN ISO 13918 and DIN EN ISO 14555. For welding studs from other materials please send us your inquiry or contact us.

On demand, the material properties can be verified by an inspection document (test report, inspection certificate) according to DIN EN 10204.

We are pleased to inform you about weldability to different base materials and welding parameters.

Dimensions

Welding studs dimensions are given in the measurement tables (all dimensions in mm). All standardised welding studs conform to DIN EN ISO 13918. Not standardised welding studs are supplied according to DIN EN ISO 13918. Special welding elements, which are not described, are delivered upon request.

Dimensions that are not listed in the measurement tables are delivered upon request.

Surface protection

Standardly our welding studs made from steel 4.8 are supplied with an electrolytic copper plating of 4-8 μm (according to DIN EN ISO 4042) as corrosion protection. Other surface treatments are possible upon request.

Threads

The threads of the studs are cold rolled (tolerance limit 6g). For surface-treated studs the tolerance limit 6h can be reached. We deliver studs with special threads upon request.

Stud flange

Welding studs for short cycle stud welding have a closely tolerated cold formed flange. The diameter of the flange is always bigger than the external diameter of the welding element (see following drawings and measurement tables). The flange increases the surface area of the stud. Consequently, the stress at the point of weld is reduced and this results in a higher quality of the stud welded joint.

Upon request, it is possible to deliver welding studs with flange dimensions other than the ones listed and welding studs without flange. However, we can only recommend the limited use of welding studs without flange – depending on the welded joint requirements. Please contact us for this.

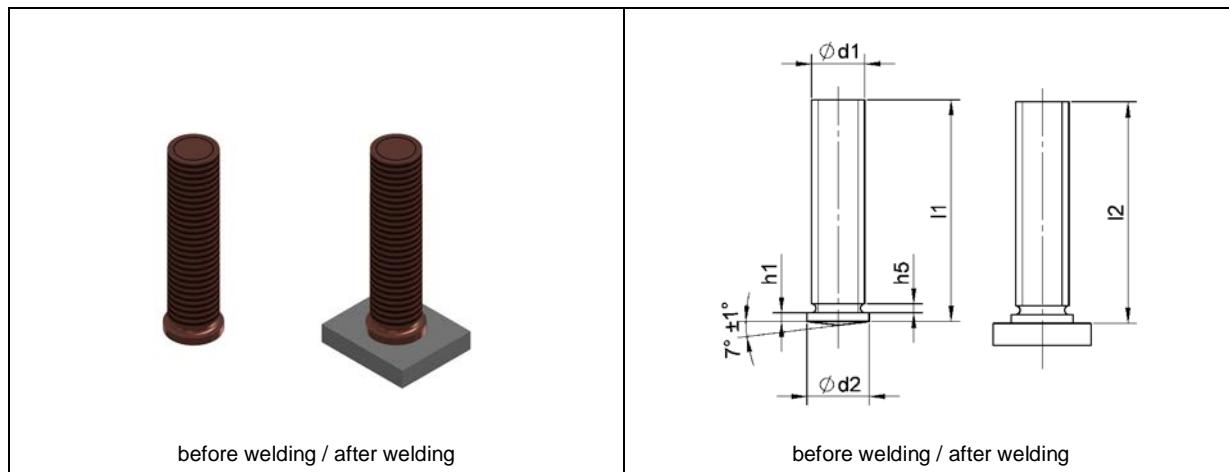

Welding face

Welding studs for short cycle stud welding have a cold formed conical welding face with dimensions closely controlled. The exact dimensions of the welding face are decisive for proper welding results.

Accessories for stud welding guns

Accessories for stud welding guns have to be adjusted to the welding element. The accessories which are to be used for the individual welding studs can be found in chapter 4.

2.2 Threaded stud (type PS acc. to DIN EN ISO 13918)

Dimensions					Material (item number)		
d_1	l_1	d_2 $\pm 0,2$	h_5 max.	h_1	Steel 4.8 copper-plated	A2-50	1.4571

Alternatively, when using ceramic ferrules type UF:

Stud dimensions		Gun accessories		
d_1	l_2	Chuck (item number)	Ferrule grip (item number)	Foot piece (Gun type: item number)
3	$20 \leq l_2 < 65$ $65 \leq l_2 < 110$ $l_2 \geq 110$	83-25-003 83-45-003 83-90-003	65-07-00	PHM-12: 83-41-022 PHM-160/161, GD 16/19/22/25: 83-40-022
4	$50 \leq l_2 < 110$ $l_2 \geq 110$	83-25-004 83-85-004	65-07-00	PHM-12: 83-41-022 PHM-160/161, GD 16/19/22/25: 83-40-022
5	$50 \leq l_2 < 65$ $65 \leq l_2 < 110$ $l_2 \geq 110$	83-25-005 83-40-005 83-85-005	65-07-00	PHM-12: 83-41-022 PHM-160/161, GD 16/19/22/25: 83-40-022
6	$50 \leq l_2 < 110$ $l_2 \geq 110$	83-50-006-25 83-85-006	65-07-00	PHM-12: 83-41-022 PHM-160/161, GD 16/19/22/25: 83-40-022

Alternatively, when using permanent ceramic ferrules type K:

Stud dimensions		Gun accessories		
d_1	l_2	Chuck (item number)	Ferrule grip (item number)	Foot piece (Gun type: item number)
3	$20 \leq l_2 < 65$ $65 \leq l_2 < 110$ $l_2 \geq 110$	83-25-003 83-45-003 83-90-003	65-31-01	PHM-12: 83-41-022-M22
4	$50 \leq l_2 < 110$ $l_2 \geq 110$	83-25-004 83-85-004	65-31-01	PHM-12: 83-41-022-M22
5	$50 \leq l_2 < 65$ $65 \leq l_2 < 110$ $l_2 \geq 110$	83-25-005 83-40-005 83-85-005	65-31-01	PHM-12: 83-41-022-M22
6	$50 \leq l_2 < 110$ $l_2 \geq 110$	83-50-006-25 83-85-006	65-31-01	PHM-12: 83-41-022-M22

3.8 Bimetallic insulation pin (type VBS, VBS-MS)

Stud dimensions		Gun accessories			
d_1	l_2	Chuck (item number)	Supporting tube (item number)	Teflon insert (item number)	Foot piece (Gun type: item number)
3	$20 \leq l_2 < 65$ $65 \leq l_2 < 110$ $l_2 \geq 110$	83-25-003 83-45-003 83-90-003	80-11-002	80-11-003	PHM-12: 83-41-035 PHM-160/161, GD 16/19/22/25: 83-40-035

3.9 Rectangular stud (type A, B, C)

Stud dimensions			Gun accessories		
b	s	l_2	Chuck (item number)	Ferrule grip (item number)	Foot piece (Gun type: item number)
15	3	≥ 20	83-03-015	65-11-00	PHM-160/161, GD 16/19/22/25: 83-40-029
15	5	≥ 20	83-05-015	65-11-00	PHM-160/161, GD 16/19/22/25: 83-40-029
25	3	≥ 25	83-03-025	65-13-00	PHM-160/161, GD 16/19/22/25: 83-40-044
25	5	≥ 25	83-05-025	65-13-00	PHM-160/161, GD 16/19/22/25: 83-40-044

3.10 Threaded stud (type M)

Stud dimensions		Gun accessories		
d_1	l_2	Chuck (item number)	Ferrule grip (item number)	Foot piece (Gun type: item number)
M8	≥ 15	83-50-008	65-08-00	PHM-12: 83-41-022 PHM-160/161, GD 16/19/22/25: 83-40-022
M10	≥ 20	83-50-010	65-09-00	PHM-12: 83-41-022 PHM-160/161, GD 16/19/22/25: 83-40-022
M12	≥ 20	83-55-012	65-10-00	PHM-12: 83-41-022 PHM-160/161, GD 16/19/22/25: 83-40-022
M16	≥ 30	83-55-016	65-12-00	PHM-160/161, GD 16/19/22/25: 83-40-029
M20	≥ 40	83-55-020	65-12-00	GD 19/22/25: 83-40-029

4. Accessories and wear parts for stud welding guns for short cycle welding studs

4.1 Threaded stud (type PS), internally threaded stud (type IS), non-threaded stud (type US), fir tree stud, colour groove stud

For stud welding guns PHM-10, PHM-1A:

Stud dimensions		Gun accessories
d_1	l_2	Chuck (item number)
M3 / 3	$l_2 \leq 40$ $l_2 > 40^1$	82-50-003
M4 / 4	$l_2 \leq 40$ $l_2 > 40^1$	82-50-004
M5 / 5	$l_2 \leq 40$ $l_2 > 40^1$	82-50-005
M6 / 6	$l_2 \leq 40$ $l_2 > 40^1$	82-50-006
7,1	$l_2 \leq 40$ $l_2 > 40^1$	82-50-071
M8 / 8	$l_2 \leq 40$ $l_2 > 40^1$	82-50-008
M10	$l_2 \leq 15^1$	82-50-010

¹Besides chucks additional special accessories are necessary (for M3-M8 resp. Ø3-8 for lengths > 40 mm, for M10 for all lengths). Please contact us for this.
